

Display Board is a 100% recyclable material that is often used in POS displays for mounting graphics on to. The material is a thick paper-based product that has some rigidity and strength to it. We have used it for header cards on temporary units.

How it's made...

Display Board is made from recycled material, the waste material is mashed into a pulp and then compressed to form Display Board. This gives the material a raw texture that could be described as similar to MDF or Valchromat.

PROS

- Display Board is made from recycled materials and can be recycled.
- It is a fairly rigid board that can be used to mount graphics too.
- It is a cheap product - for short term solutions Display Board is great.
- The raw look of the material appeals to displays in the arts & crafts sector.
- It comes in a range of thicknesses.

CONS

- It is not suitable for long term uses unless protected within the unit design.

DM SUSTAINABILITY RATING

Start-of-Life (SOL)
Is it made from recycled material?

Yes it has Recycled Content

End-of-Life (EOL)
Can it be recycled?

Yes it is Recyclable

When should I consider Display Board?

If you need a large graphic with rigidity then Display Board is what you need to mount your graphic to. Within reason the material will stand up right with minimal support, it will also not bend and fold like a paper or card graphic might.

Display Board End-of-Life

Display Board can be recycled with waste paper. The material itself is 100% recyclable. It will need separating out from any mounted graphics before recycling.

Display Board with mounted vinyl graphic. Fixed to the unit base with two foam pads.
